

ANUBHAV JHA

+91-9102313439 — Bhopal, Madhya Pradesh — anubhavjha0812@gmail.com — [LinkedIn](#) — [GitHub](#)

EDUCATION

Vellore Institute of Technology, Bhopal

2023 - 2027 (Exp.)

B.Tech in Computer Science and Engineering (AI & ML)

GPA: **8.5** / 10

Coursework: DSA, OOPS, DBMS, Probability, Statistics, Applied Linear Algebra, Machine Learning, Linux

SKILLS

Programming Languages: Python(Numpy, Pandas), JavaScript, Java, SQL(PostgreSQL), NoSQL(MongoDB)

Full Stack: React.js, Tailwind CSS, Redux Toolkit, Node.js, Express.js, **FastAPI**, Docker, **AWS**, Git

AI/ML: Supervised Learning, Unsupervised Learning, **Deep Learning** (CNNs, RNNs)

Architecture & Core Concepts: HLD, LLD, Distributed Systems, Operating Systems, Computer Networks

EXPERIENCE

Summer Research Intern

May 2026 – Present

National Institute of Technology Rourkela

- Working on biomedical **signal and image processing** using ECG, EEG, EMG, and medical imaging data, applying preprocessing, feature extraction, and **DL techniques** for biomedical analysis and diagnosis applications.

Quant Developer Intern

Oct 2025 – Dec 2025

Alaka Research LLP

- Processed large-scale financial datasets using AWS (S3, Glue), designing **ETL** workflows to clean, transform, and structure raw data, **reducing manual preprocessing** and improving data readiness for downstream analysis.
- Built and optimized data pipelines for backtesting workflows, performing SQL-based query analysis to eliminate redundant computations and improve data access patterns, **reducing overall data processing time by ~20%**
- Implemented and tuned **time-series models** using historical financial data, improving signal consistency and supporting more reliable strategy evaluation during backtesting.

PROJECTS

Thumbly – AI Thumbnail Generator

[GitHub](#)

- Developed a full-stack MERN application with **JWT** authentication, integrating the Google Gemini API to generate AI-powered custom thumbnails from user prompts. Enabling on-demand visual content creation.
- Built a responsive React frontend for style customization and a MongoDB backend to store user profiles and image history, ensuring seamless data persistence and user session management.
- Designed RESTful APIs to handle prompt processing and image generation, reducing latency through optimized request handling between frontend and Gemini API.

TrendPulse – Automated Trading Algorithm

[GitHub](#)

- Developed a **multithreading**-based trading algorithm in **Python** to automate financial market analysis, using NumPy and Pandas for data manipulation and signal computation.
- Deployed the solution on **AWS EC2** with Linux-based configuration, **implementing cron jobs** for scheduled execution and ensuring high availability for continuous market monitoring.
- Integrated SmartAPI for live market data streaming and order placement, optimizing execution logic to reduce latency and improve trade response times.

CERTIFICATIONS

- AWS Technical Essentials (AWS Training & Certification)
- Applied Machine Learning in Python by the University of Michigan (Coursera)
- SQL (HackerRank)
